Re: Church & Dwight Co., Inc. Arm & Hammer™ Sodium Bicarbonate USP Residual Solvents Statement

Church & Dwight Co., Inc. Sodium Bicarbonate USP, does not require Residual Solvents testing under USP <467> Residual Solvents.

The sodium bicarbonate manufacturing process begins with the dissolution of sodium carbonate in purified water. Carbon dioxide is bubbled through the sodium carbonate solution and sodium bicarbonate is formed. The sodium bicarbonate is recovered as a wet cake. Water is removed from the sodium bicarbonate mechanically in a centrifuge and finally by drying.

No solvents other than water are used in the sodium bicarbonate manufacturing process. There is no potential for solvents to be formed in the manufacturing process. Based on our knowledge of the manufacturing process and procedures, and controlled handling and storage of the sodium bicarbonate, there is no potential for residual solvents to be present.

If you have any questions or comments, please feel free to contact me.
